

# HURFORD ROASTED ASH DECKING

## THERMALLY MODIFIED

A heat treating process to thermally modify the cell structure of the timber to produce a product that is extremely stable & durable without the use of chemicals.

## INVISIBLE FIXATION

The speciality designed decking clips allows the gap between the boards and the underconstruction optimal ventilation space, ensuring proper expansion & enhances drying.

## EXCLUSIVE ENGINEERING

The exclusive and highly durable end matched locking design allows for a faster installation and reduces waste costs, as the decking can be joined anywhere.

### Stability Plus

Hurford Roasted Ash Decking is extremely stable with around half the movement of other kiln-dried timber decking products. Making this decking unlikely to warp, check, bow, cup or twist, expand or contract.

### Chemical Free Treatment

Roasted Ash uses a thermal high temperature treatment that changes cell structure to reduce woods absorbency. This significantly improves and protect the product resistance from mould and rot without the use of any chemicals.

### End Matched Decking

Using a specially designed end matched profile created for external use, means the decking can be joined anywhere, rather than having to dock material (creating waste) and joining on top of a joist - this translates to a saving of precious resource as well as money.

### Traditional or Secret Fixing

Hurford Roasted Ash Decking can be fixed using the traditional method through its face or using the unique invisible fixation system. The decking clips provide a gap for optimal ventilation between the decking boards and substructure the enhances drying and prevents waterlogging.

### Keep your deck looking good

All timbers age and change colour when used outside. To help protect against this, coating your deck with a suitable external decking finish is advisable. This will assist in maintaining and protecting your deck into the future\*

\*Always follow the manufactures instructions when applying decking finishes - particularly around the number of coats required and the frequency of recoating to maintain the best possible finish.

### Technical information...

Species	North American White Ash
Grade	Select
Treatment	All Natural, Chemical FREE, Thermally Modified
Colour	Dark Chocolate Brown Tones with Defining Grains
Width	132mm
Thickness	20mm
Length	Random 1000mm to 4200mm long
Profile	3mm Pencil Round on Side
End Locking	V-Joint End Matched JEM™
Joist Spacing	450mm
Fixing	Unique Invisible Fixation System or Traditional
Install Aid	Specially Designed T-Bar Clamp
