

AVAILABLE FROM

STAINLESS STEEL HARDWOOD SCREW & DRIVER

The screw for fastening cladding/decking boards without pre-drilling, thanks to the drilling tip.

Small countersunk head with underhead pockets.

Your advantage:

The head can be sunk very easily and cleanly with a small diameter. The under-head pockets pick up protruding chips. However, with tropical hardwoods, countersinking of the surface is recommended, as the wood has very short chips.

Grooved shaft

Your advantage:

Provides for additional screw strength as austenitic stainless steel (A2) cannot be hardened. This virtually eliminates the possibility of the screw tearing off.

Drilling tip

Your advantage:

Splitting and tearing of the wood is prevented.

AW® drive 20

Your advantage:

Excellent snug fit of the bit in the screw drive, which allows the screw to be set very easily. Wobbling impacts and sliding of the bit from the screw is prevented when screwing in.
