

LIGNIA is the ultimate modified timber produced in the UK. Real wood that delivers beauty along with superior performance and durability through a unique modification process.

LIGNIA starts out life as a softwood (Radiata Pine) from FSC®-certified managed plantations and once modified gives it the appearance and properties of hardwood.

LIGNIA is an incredibly stable timber due to its incredibly low tangential and radial movement.

LIGNIA has many applications and is often used for decking, flooring, cladding, screening and general joinery such as doors and window frames.

- **Density through modification is increased to an average of 650kg/m³, improving mechanical properties.**
- **pH neutral - not corrosive and standard steel fixings can be used without causing corrosion to the metal.**

* LIGNIA is a golden honey colour which is permanent and penetrates the entire piece of timber.

LIGNIA 'Clear Grade' Rough Sawn Available Sizes

100x25	100x38	100x50
150x25	150x38	150x50
200x25	200x38	200x50
